WinAC Shutdown

The WinAC expansion **Shutdown** offers a direct shutdown of the PC straight from the PLC program.

Functionality

When you use **Shutdown** it is possible to shut down the PC where WinAC is in operation, from the PLC program with one function call.

Scope of supply

In addition to the Win AC expansion (as DLL) and comprehensive online help, the scope of supply also includes a Step7 demo program which demonstrates how to use **Shutdown**.
The Step7 demo program contains the required FBs/DBs, which can be used in your own applications.

Examples of use

The Shutdown-FB can be used in example in conjunction with an UPS (uninterruptible power supply): After a given time the PC/PC's can be shut down in a controlled way to avoid data loss in case of exceeding the UPS capacity and following power failure.
