Support

This entry originates from Siemens Industry Online Support. The conditions of use specified there apply (www.siemens.com/nutzungsbedingungen).

Security Information

Siemens provides products and solutions with industrial security functions that support the secure operation of plants, systems, machines and networks. In order to protect plants, systems, machines and networks against cyber threats, it is necessary to implement – and continuously maintain – a holistic, state-of-the-art industrial security concept. Siemens' products and solutions only form one element of such a concept.

The customer is responsible to prevent unauthorized access to its plants, systems, machines and networks. Systems, machines and components should only be connected to the enterprise network or the internet if and to the extent necessary and with appropriate security measures (e.g. use of firewalls and network segmentation) in place.

Additionally, Siemens' guidance on appropriate security measures should be taken into account. For more information about industrial security, please visit <http://www.siemens.com/industrialsecurity>.

Siemens' products and solutions undergo continuous development to make them more secure. Siemens strongly recommends to apply product updates as soon as available and to always use the latest product versions. Use of product versions that are no longer supported, and failure to apply latest updates may increase the customer's exposure to cyber threats.

To stay informed about product updates, subscribe to the Siemens Industrial Security RSS Feed under <http://www.siemens.com/industrialsecurity>.

1 General Information

1.1 Task

Question

How do you migrate a project integrated in STEP 7 from WinCC flexible to WinCC (TIA Portal) V15?

Task

Your customer has an MP 277 Touch configuration integrated in STEP 7.
For a subsequent plant/machine only the MP 277 Touch configuration described is to be migrated to WinCC (TIA Portal) and replaced by a Comfort Panel.

Solution

A description is given in the example of the separate steps for migrating the MP 277 Touch to WinCC (TIA Portal) V15.

Note

Bear in mind that with WinCC (TIA Portal) V15 and higher some operator panels of earlier versions are no longer supported (Operator Panels, for example).

Refer here to the FAQ response entitled "When upgrading your TIA Portal project to V15 why do you get an error and the message indicating that the HMI device is not supported?" in Entry ID: [109754931](#). This entry lists all the HMI devices that are no longer supported.

Alternatively you can refer to the "Delivery release for WinCC V15" in Entry ID: [109753803](#).

1.2 Migrating a WinCC flexible Project Integrated in STEP 7

If you have a STEP 7 project in which a project created with WinCC flexible is integrated, then you can migrate this configuration directly to WinCC (TIA Portal) V15 depending on the operator panel used and the version of WinCC flexible.

The general software requirements regarding the version of WinCC flexible and WinCC (TIA Portal) are given in entry [77430539](#), "Migration Guide; helps you to migrate from WinCC flexible to WinCC (TIA Portal)", chapter 5.

In the following we describe in detail how to migrate only the WinCC flexible project to WinCC (TIA Portal).

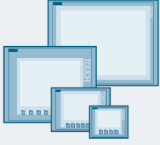

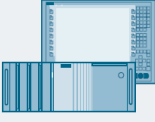

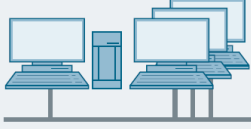

Notes

The description and screens used are independent of which version of WinCC (TIA Portal) is used.

1.3 WinCC (TIA Portal) Versions

The version of WinCC (TIA Portal) you need depends on the operator panel used. The following table gives an overview.

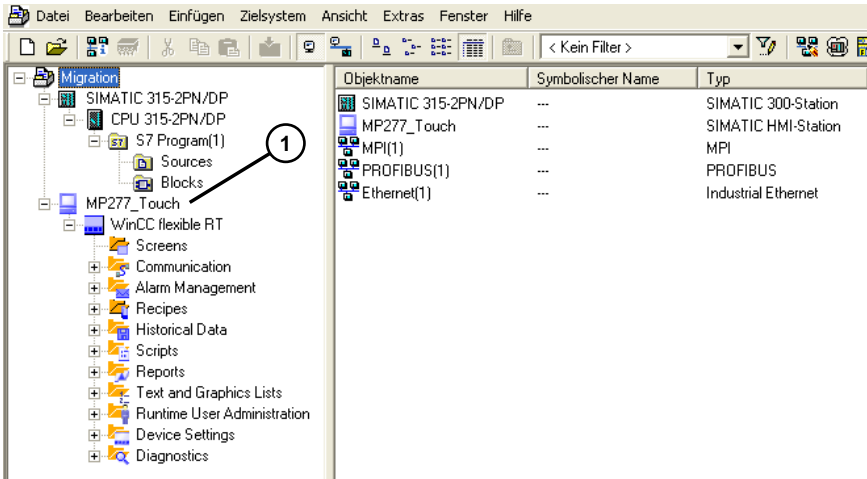

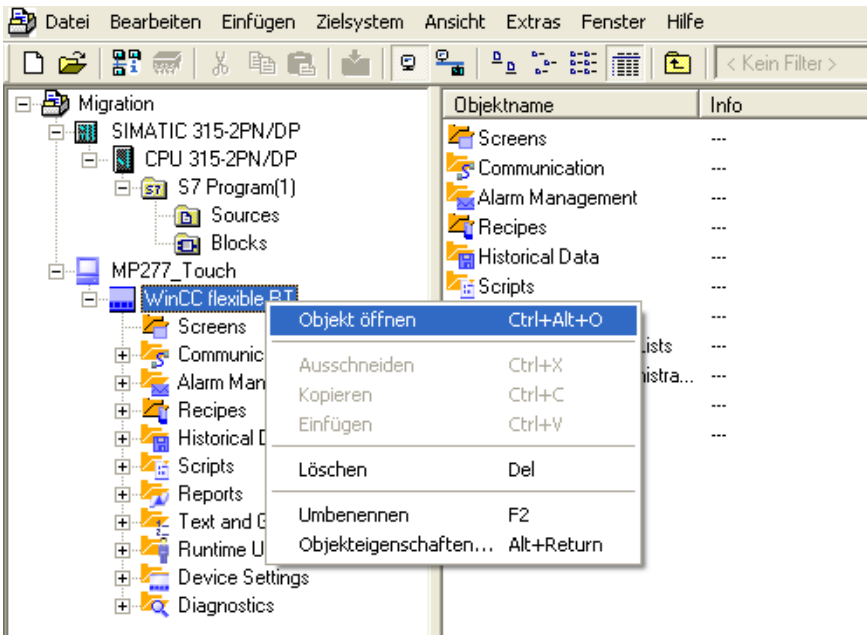

Figure 1-1

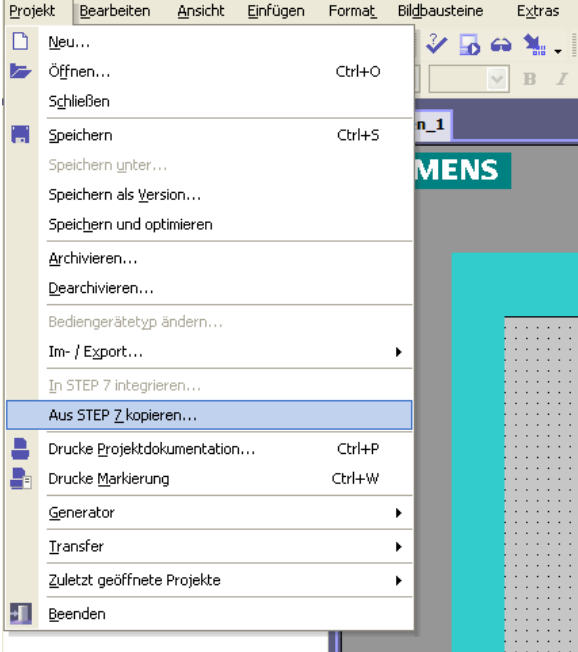

Engineering Software	WinCC Professional			
	WinCC Advanced			
	WinCC Comfort			
	WinCC Basic			
Runtime Software und Zielsysteme	Basic Panels	Comfort Panels Mobile Panels x77 Panels und Multi Panels	PC-basierte Einzelplatzsysteme z. B.: SIMATIC IPC	PC-basierte Mehrplatzsysteme SCADA-Funktionalität
	Integriertes Runtime Modul	Integriertes Runtime Modul	WinCC Runtime Advanced	WinCC Runtime Professional

No.	Description
3.	<p>Copy a project from STEP 7</p> <p>Select the menu command "Project > Copy from STEP 7...".</p> <p>The "Save Project As" dialog box opens.</p>  <p>The screenshot shows the 'Projekt' menu in WinCC flexible. The menu items are: Neu..., Öffnen... (Ctrl+O), Schließen, Speichern (Ctrl+S), Speichern unter..., Speichern als Version..., Speichern und optimieren, Archivieren..., Deaktivieren..., Bediengerätetyp ändern..., Im-/Export..., In STEP 7 integrieren..., Aus STEP 7 kopieren... (highlighted), Drucke Projektdokumentation... (Ctrl+P), Drucke Markierung (Ctrl+W), Generator, Transfer, Zuletzt geöffnete Projekte, and Beenden.</p>
4.	<p>"Save Project As" pop-up menu</p> <p>By default the "Save Project As" pop-up menu displays the folder view of the STEP 7 project from which you wish to copy the HMI project.</p> <p>Search: You can save the HMI project directly in the folder structure of the current STEP 7 project. However, it is recommended to create a separate folder in which you store the HMI project. You can select a path and folder in the drop-down list box (1).</p> <p>File name: You can either apply the preset file name or give the project a new name.</p> <p>After making the appropriate settings you save the configuration by clicking the "Save" button.</p> <p>The HMI project is saved and this completes the "Copy from STEP 7" procedure. You can close WinCC flexible and STEP 7 again.</p>

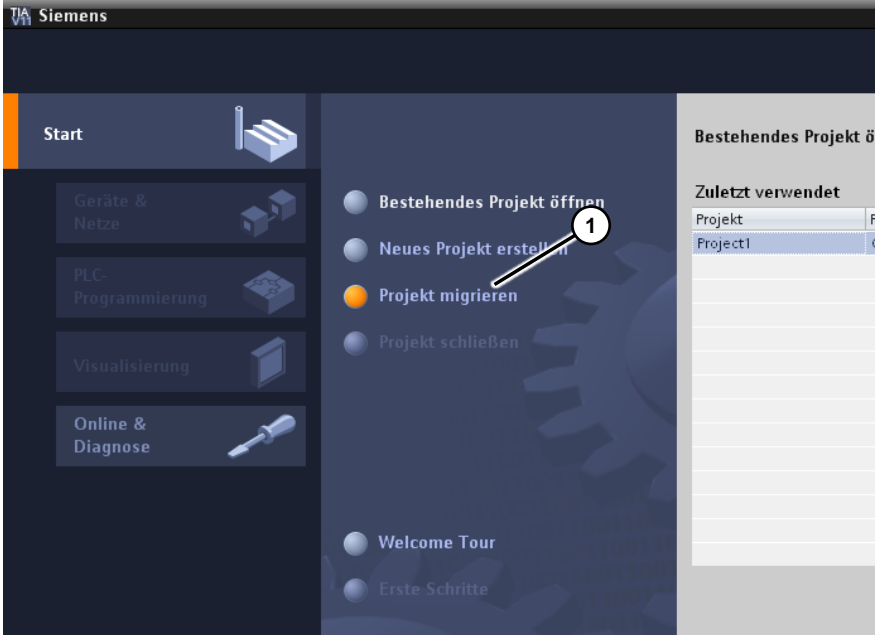

No.	Description
	
5.	<p>Additional information:</p> <p>After you have executed the "Copy from STEP 7..." function, the HMI configuration is still in the STEP 7 project.</p> <p>Only a "copy" of the HMI configuration is made.</p> <p>For this reason it is better to save the copied HMI project in a separate folder.</p> <p>To remove it from the STEP 7 project you must delete the HMI project from the STEP 7 Manager.</p>

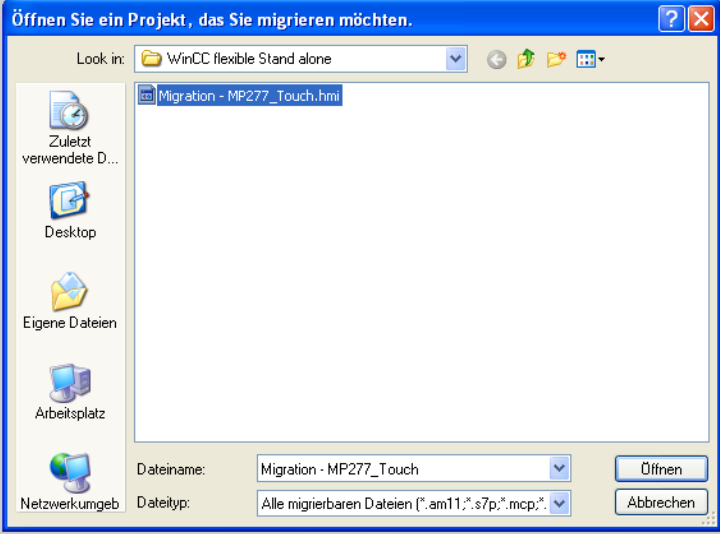

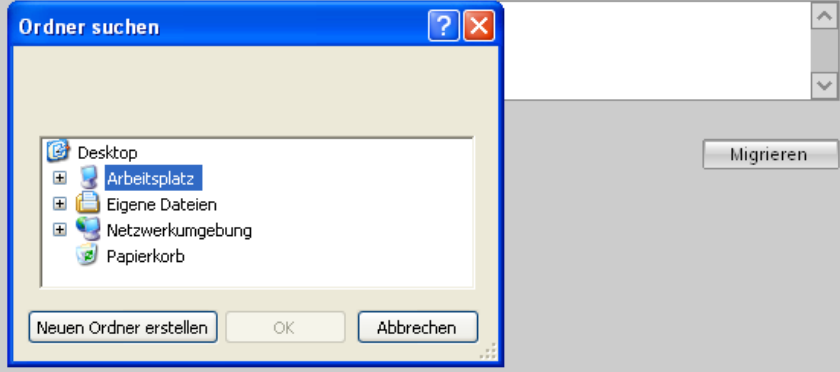

3 Migrating HMI Configurations

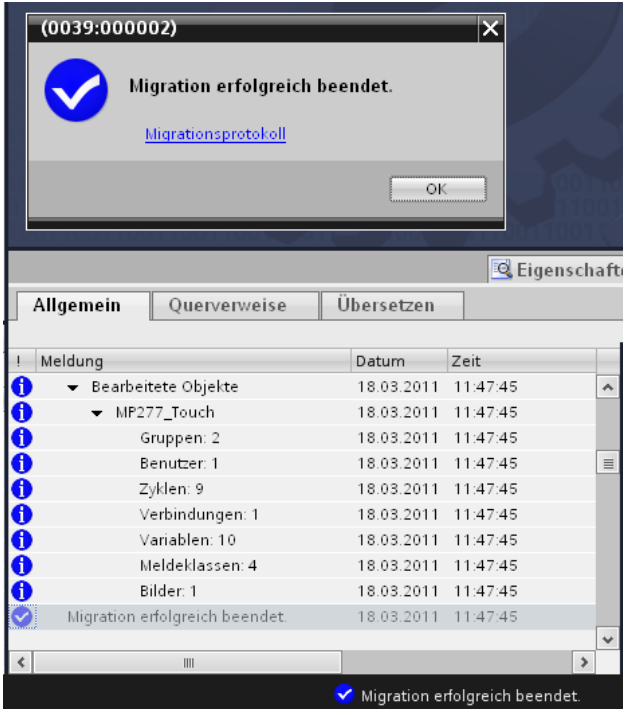

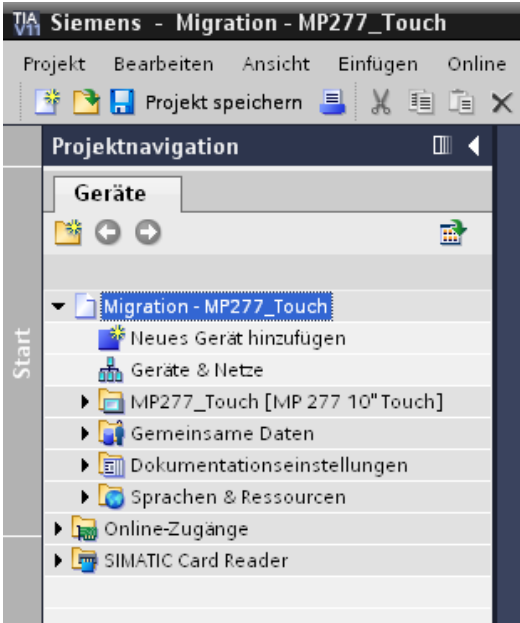

Migrate HMI configuration to WinCC (TIA Portal)

If the HMI operator panel to be migrated is supported by WinCC V15, you can migrate the HMI configuration with WinCC (TIA Portal) V15. In this case we are talking about an MP 277 Touch that is no longer supported in "WinCC V15" → Migrate with WinCC (TIA Portal V14).

Table 3-1

No.	Description
<p>1.</p>	<p>Portal view, migrate project</p> <p>When the "WinCC (TIA Portal)" is started, the "Portal view" is displayed first of all.</p> <p>Here you choose the "Migrate project" item (1).</p> 
<p>2.</p>	<p>Migrate project, specify source path</p> <p>After selecting the "Migrate project" item you can specify the "Source path" in which the HMI project to be migrated is located.</p> <p>Mark the HMI project and click the "Open" button.</p>

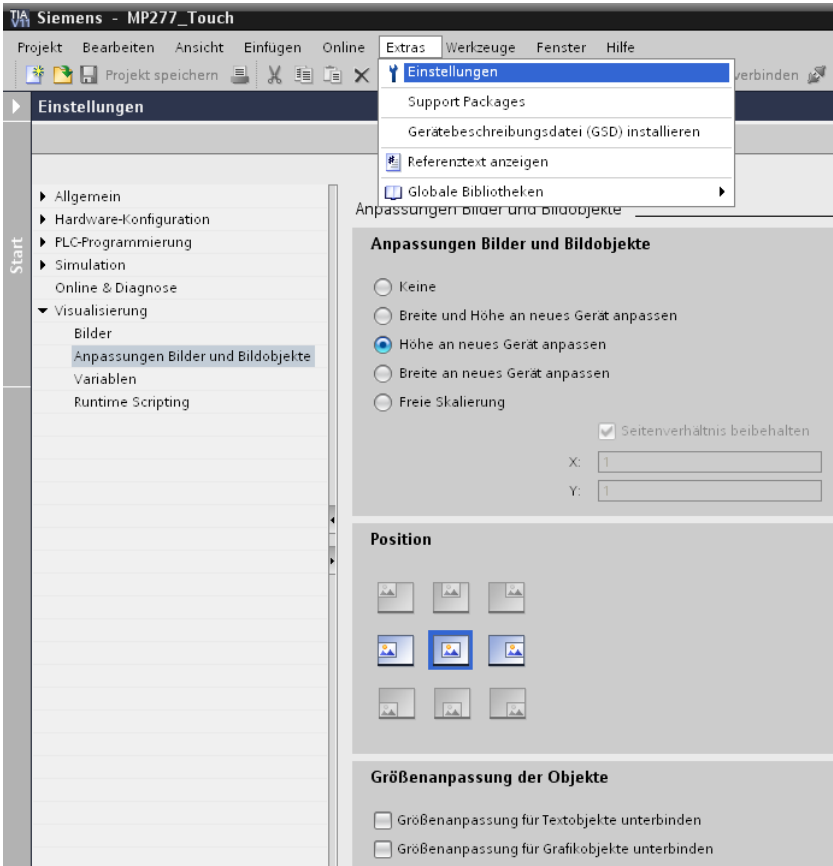

No.	Description
	<p>Projekt migrieren</p> <p>Wählen Sie das zu migrierende Projekt aus.</p> <p>Projektname: <input type="text"/></p> <p>Quellpfad: <input type="text" value="-Wählen Sie das zu migrierende Projekt aus-"/></p> 
3.	<p>Migrate project, specify target</p> <ul style="list-style-type: none"> • After specifying the "Source path" you select the "Target path". • You can accept or change the "Project name". • Then click the "Migrate" button (1). • Migration is started. <p>Note: You cannot migrate the HMI project directly into an existing WinCC (TIA Portal) project.</p> <p>Ziel</p> <p>Projektname: <input type="text" value="Migration - MP277_Touch"/></p> <p>Zielpfad: <input type="text" value="C:\Projects\Code\Migration\WinCC TIA Stand alone"/></p> <p>Autor: <input type="text" value="TIA-Portal"/></p> 

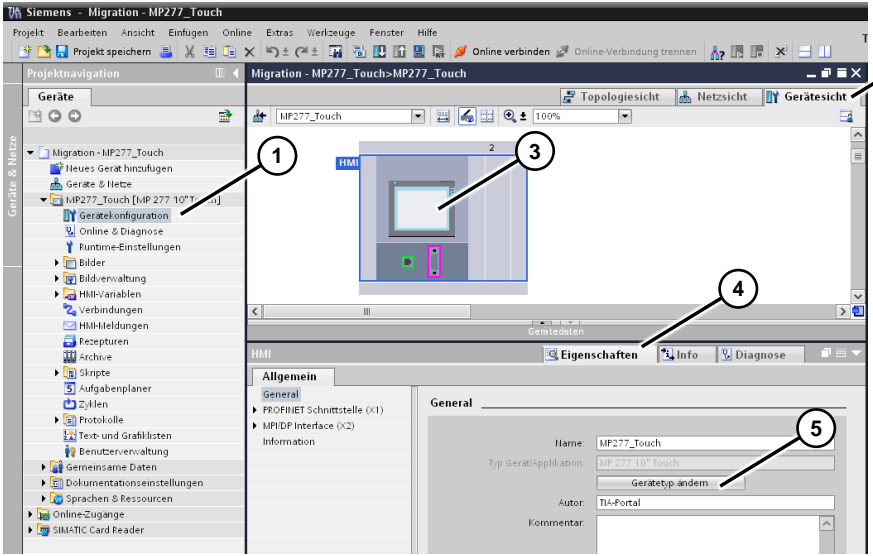

No.	Description
4.	<p>Final message</p> <p>A message informs you when the migration has been completed. During the procedure, the progress of the migration is displayed accordingly.</p> <p>Click the "OK" button to acknowledge the message.</p>  <p>The image shows two screenshots. The top one is a dialog box titled '(0039:000002)' with a blue checkmark icon and the text 'Migration erfolgreich beendet.' Below it is a link 'Migrationsprotokoll' and an 'OK' button. The bottom screenshot shows a software interface with tabs 'Allgemein', 'Querverweise', and 'Übersetzen'. Below the tabs is a table with columns 'Meldung', 'Datum', and 'Zeit'. The table contains several rows, with the last row 'Migration erfolgreich beendet.' highlighted. At the bottom of the interface, there is a status bar with a blue checkmark and the text 'Migration erfolgreich beendet.'</p>
5.	<p>View of the migrated HMI project</p> <p>The adjacent screen shows the migrated HMI project in the project tree.</p>  <p>The image shows a screenshot of the Siemens project navigation interface. The title bar reads 'Siemens - Migration - MP277_Touch'. Below the title bar is a menu bar with 'Projekt', 'Bearbeiten', 'Ansicht', 'Einfügen', and 'Online'. Below the menu bar is a toolbar with icons for 'Projekt speichern', a list icon, a scissors icon, a document icon, and a close icon. Below the toolbar is a 'Projektnavigation' panel. The panel has a 'Geräte' tab and a 'Start' button. The main area of the panel shows a tree view with the following items: 'Migration - MP277_Touch' (selected), 'Neues Gerät hinzufügen', 'Geräte & Netze', 'MP277_Touch [MP 277 10" Touch]', 'Gemeinsame Daten', 'Dokumentationseinstellungen', 'Sprachen & Ressourcen', 'Online-Zugänge', and 'SIMATIC Card Reader'.</p>

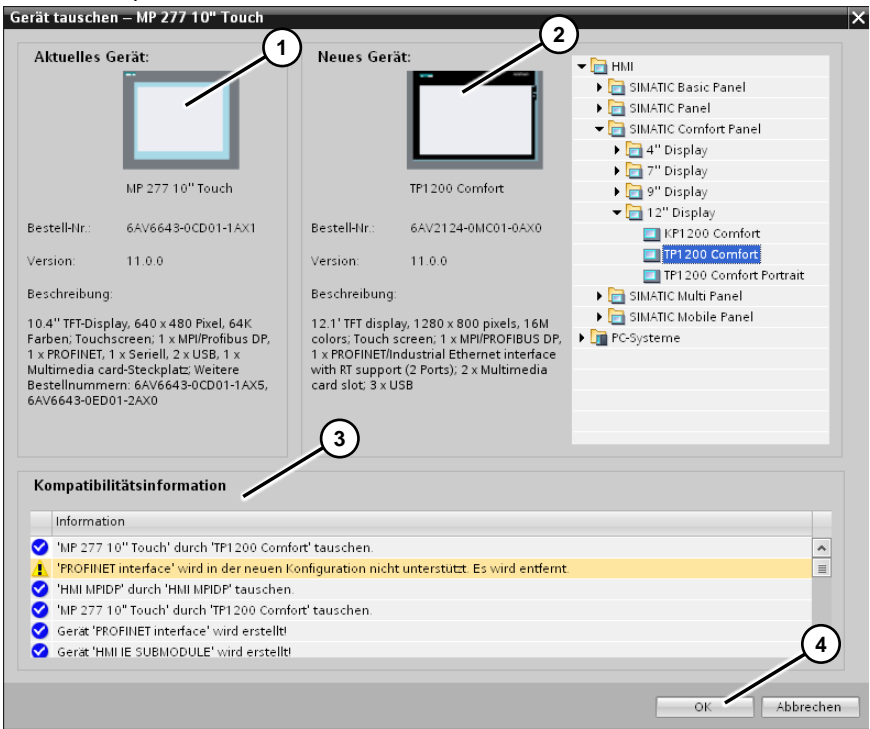

4 MP 277 Touch → TP 1200 Comfort Panel

Instructions for operation panel replacement

Table 4-1

No.	Description
1.	<p>Preparatory measures, settings</p> <p>Go to "Options > Settings > Visualization > Resize screen" to specify the properties of the screens.</p> <p>In this example, because of the change to wide-screen format, we select the following settings:</p> <ul style="list-style-type: none"> • Fit height to new device • Centered position <p>Information on the separate items is available in the Online Help. Keyword: "Resize objects".</p> <p>Furthermore, examples of the effect of the settings are shown in the manual "Migration Guide for Comfort Panels", in the section entitled "Change Screen from 4:3 to Wide Screen". You can download the manual in Entry ID: 49752044.</p> 

No.	Description
2.	<p>Change device type</p> <ul style="list-style-type: none"> In the project tree you double-click to open the device configuration of the HMI operator panel (1). Select the "General" button (2). Mark the HMI object (3). Select the "Properties" tab (4). Under "General" there is the "Change device type" button (5). <p>Click the "Change device type" button. The "Change device" dialog opens.</p> 

No.	Description
3.	<p>Change device dialog</p> <ul style="list-style-type: none"> • Current device (1): In this area you find a description of the current operator panel. • New device (2): In the drop-down list box you select an HMI operator panel or PC system. • Compatibility information (3): This field displays the compatibility information about the newly selected operator panel. <p>Once you have selected the HMI operator panel, click the "OK" button (4) to confirm your selection. The change procedure starts.</p> <p>In this example TP1200 Comfort has been selected.</p> 

No.	Description
4.	<p>Change name</p> <p>Change the name of the HMI operator panel to avoid mix ups. For this, in the project tree you right-click the name of the HMI operator panel. A pop-up menu opens. Here you choose the "Rename" item.</p> <p>This completes the device change procedure.</p>
